

## ESG Sample – Unstructured Long Text

Throughout the reporting year, the organisation advanced multiple initiatives aimed at decarbonising its operations. In 2024, total GHG emissions (tCO<sub>2</sub>e) reached 123,400, reflecting a modest change compared to the previous year.

Energy consumption (MWh) remained relatively stable at 500,000, with a gradual shift towards renewable electricity sourcing. The company invested in energy efficiency measures in production facilities and office locations.

Total water withdrawal (m<sup>3</sup>) amounted to 1,200,000, with ongoing efforts to reduce abstraction from water-stressed regions. Operational teams continue to monitor water performance through site-level metrics and internal dashboards.

The narrative format and dispersed KPI references are intended to test sentence-based extraction capabilities rather than structured table logic.
